3/10/24 Expt - 12 End to end communication at transport layer.

AIM:

To implement an echo - client server using TCP/UDP Socket and implement a chat client - server using Socket programming.

a) Echo - client - server using TCP/UDP.

a Socket is an endpoint used for communication btw two device for communication btw two device. In an echo program, the client sends a message to server and the server sends the same msg back to client.

Procedure:

1) Create server program and client program.

2) Import the required socket library

3) In server, create a socket and bind it to on IP address and port.

4) Make the server listen to client request.

5) Start client and connect to server.

6) Enter msg from client.

7) Send msg to server.

8) The server receives the msg ad send same msg back.

10) Close socket connection.

b) Client server using socket program.

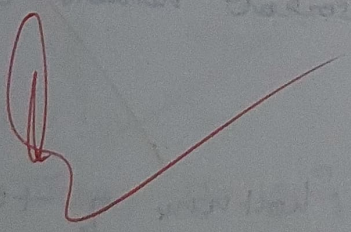

1) Create server and client program using socket programming.

2) Start client & connect it to server

3) Continue sending & receiving msg to perform chat.

4) Close the connection.

Result:

The end to end communication was successfully implemented using TCP / UDP sockets.
