2/10/24 Ex-14 Raw Sockets - packet sniffing.

Aim:

To write a program using RAW Sockets to implement packet sniffing.

Theory:

A packet sniffer is a program used to capture and examine network packets travelling through a network Interface.

Requirements:

- Computer / Laptop
- Python.
- RAW Socket support.

Algorithm:

1) Start the program
2) Create RAW Socket.
3) Bind the Socket to required equipment.
4) Wait for Incoming network packets.
5) Stop program when required.

procedure:

1) open python IDE or terminal.

2) create a python program for packet sniffing.

3) Import . socket module

4) Create RAW Socket.

5) Use recv from (), fun to receive packet.

6) Read captured packed data.

7) display packet Information.

8) Generate some network traffic.

Result:

Thus, RAW Socket based packet sniffing program was implemented successfully.
