Practical - 5

Expt 5. packet capture tool WIRESHARK.

Aim:

Experiments on packet capture tool wireshark

Packet Sniffer:

→ Sniffer messages being sent/received from/by your computer.

→ Stores and display the contents of the various protocol fields in the message.

→ passive

(i) Never sends packets itself.

(ii) No packets addressed to it

(iii) Receives a copy of all packet (sent/received)

Procedure:

→ Select the local area connection in wireshark.

→ Go to capture options.

→ Select capture and stop at automatically after 100 packets.

→ Then click start capture.

→ Save packets.

i) Create a filter to display only TCP/IP packets, inspect the packets and provide the Flow graph.

→ Go to search bar at the top of the tool.
→ Search TCP packets in search bar.
→ To get Flow graph click statistics Flow graph.
→ Save the packets.

ii) Create a Filter for ARP packets.

* Go to search option.
* Search ARP packets in search bar.
* Save the packets.

iii) Creating a Filter to display DNS packets and provide the Flow graph.

iv) Creating a filter for ICMP and DHCP packets and inspect and show the packets

v) Create Filter for ICMP and DHCP packets and inspect and show the packets.

Result:

Wireshark help us in analysing and understanding our network traffic and packets flow through various filters and flow graphs.
