Practical - 7.

Ex 7 - Sliding Window

Aim:

To implement flow control using the Sliding window Protocol and simulate frame transmission between two nodes.

Sender program:

1) Input window size and text msg.
2) Divide text into frames, one character per frame.
3) Save and display frame in Sender_Buffer
4) Read ACK/NACK from Receiver_Buffer after a delay.

Receiver program:

1) Read frame from Sender_Buffer.
2) Check frame number.
3) Write ACK/NACK in Receiver Buffer.

Student Observation:

Implemented the Sliding window Protocol and verified frame transmission using ACK/NACK.

Input:

Window size & text msg.

Output:

Frames transmitted with ACK/NACK verification

Result:

Thus flow control was successfully implemented using Sliding window protocol.
